PROFILE

Computer Science student specializing in software engineering, cross-platform apps (Flutter), real-time backends, and IoT. HackerRank Certified Software Engineer Intern skilled in Python pipelines, relational databases, and AI/Computer Vision modules. Proficient in utilizing AI tools (Copilot, Claude) to accelerate development and software testing cycles.

EDUCATION

President University **September 2024 – Present**
Bachelor of Computer Science **GPA: 3.85/4.00**
Relevant Coursework: Internet of Things (IoT), Software Engineering, Database Systems, Data Structures & Algorithms, Machine Learning, Computer Vision, Web Development.

PROJECTS

- Technical Project Manager & Backend Developer – OxyWatch (IoT Smartwatch Health App)** **2026 (Ongoing)**
- Co-developed a Flutter multi-user ecosystem handling real-time smartwatch biometrics (SpO2/Heart Rate) via Firebase.
 - Built a rule-based AI Agent for low-latency clinical alerts and mapped automated nearby hospital routing.
 - Optimized backend endpoints to process concurrent media payloads cleanly while applying strict version control protocols through Git.
- Lead Developer – Nara Calendar (Contextual AI Daily Planner)** **2025-2026**
- Built a scalable Flask API coupled with structured relational database layers (MySQL/SQLite) to securely log user biometric and emotional state data.
 - Integrated Computer Vision facial recognition algorithms for user login and developed voice-to-text ingestion pipelines allowing multi-modal event logging.
 - Authored backend decision logic to analyze calendar density metrics, trigger automated wellness recommendations, and used GitHub Copilot to ensure extensive test coverage.
- Lead AI & Backend Developer – MERCI (AI-Powered Skincare E-Commerce Platform)** **2025-2026**
- Architected an interactive e-commerce platform in Flutter integrated with a specialized backend conversational AI pipeline to evaluate ingredient metadata.
 - Programmed rule-based AI boundaries for safe product ingredient pairings while maintaining standard e-commerce features (auth, cart management, payments).
 - Optimized backend endpoints to process concurrent media payloads cleanly while applying strict version control protocols through Git.
- Lead Computer Vision Engineer – B-Tect (AI Medical Imaging platform)** **2025**
- Created an AI-driven image analysis platform utilizing Python to evaluate bone X-ray fractures and predict underlying traumas (dislocation, ballistic impact) with structured logic.
 - Built localized object detection pipelines with bounding boxes to visually classify and tier digital burn injury photos across four distinct clinical degrees.
 - Drafted complete API system documentation and ran rigorous software testing workflows to validate model diagnostic bounds.

TECHNICAL SKILLS

Languages: Python, Dart, JavaScript, C++, HTML/CSS, TypeScript, Structured Logic.
Frameworks/Tools: Flutter, React.js, Node.js, Firebase (Firestore/Storage/Auth), Flask, Git, RESTful APIs.
Databases: MySQL, SQLite, PostgreSQL, SQL Server, MongoDB.
AI & Data Engineering: Copilot/Claude, Automated Code Review, Object Detection, Telemetry Ingestion.

CERTIFICATIONS & TRAINING

- Software Engineer Intern Role Certification** – HackerRank (2026)
- Problem Solving (Intermediate) Certificate** – HackerRank (2026)
- Python (Basic) Certificate** – HackerRank (2026)
